

UI & UX DESIGN

BAD DESIGN TO GOOD DESIGN

-BY PRADEEP SINGH B

The above ui design of health and family welfare department is poor and inconsistent and no clear focus making it hard for the users to read and use it.

Overloaded screens with too many images and unnecessary texts.

The above ui design is clean and minimal design that avoids Unnecesary elements and only essential features and information are displayed.

It is simple and has consistent colours, fonts and button styles
Users find it quickly without confusion.
