Task Analysis:

Task analysis is the process of breaking down user activities into smaller tasks to understand their goals, behaviours, and challenges when interacting with a product. It helps in designing an intuitive and efficient user interface.

Steps in Task Analysis:

1. Identify the List the tasks users need to perform to achieve their goals.
2. Break Down Tasks into Steps – Analyze each task step-by-step.
3. Identify Challenges and Pain Points – Look for friction points that might hinder task completion.
4. Optimize the Flow – Redesign tasks for better usability and efficiency

Steps in Online Shopping app:

1. Open the app.
2. Search for a product.
3. Browse categories and select items.
4. Add items to cart.
5. Review the product.
6. Choose a payment method and complete payment.
7. Track order until delivery.

User Flow:

User flow is a visual representation of the path a user takes within an app or website to complete a specific task. It helps designers create seamless navigation and an efficient interface.

KEY ELEMENTS OF USER FLOW:

- **Entry Point:** Where the user starts (e.g., home page, login screen).
- **Decision Points:** Choices the user makes (e.g., selecting a product category).
- **Actions:** Steps the user takes (e.g., adding items to the cart).
- **Exit Point:** The final destination (e.g., checkout confirmation).
