EXPERIMENT WITH DIFFERENT LAYOUT AND COLOUR SCHEMES
AND COLLECT USER FEEDBACK FROM GNU

PROCEDURE:

- 1) INSTALL GMP APPLICATION
- 2) CREATE A BASE LAYOUT
- 3) ADD UI ELEMENTS
- 4) DIFFERENT COLOUR SCHEMES
- 5) COLLECT USER FEEDBACK

1) GMP APPLICATION

Launch the GMP application and set the dimensions for the app
Layout

2) CREATE A BASE LAYOUT

This is the base layout for my INSTAMART APP. It contains a top search bar for searching groceries, medicines etc. It contains 4 navigation buttons: home, groceries, medicines and categories. The content area has 6 placeholders for trending groceries.

3) ADD UI ELEMENTS

At the top, the Header includes a user profile icon, a centrally placed search bar for finding products, and a promotional text section ("Hurry! Claim your Free Cash") alongside a special offer icon, enhancing user engagement.

Directly below the header is a set of prominent, pill-shaped navigation buttons labeled Home, Medicines, Grocery, and Categories, providing quick access to different sections of the app.

The Content Area showcases a variety of product images laid out in a grid format, including snacks like Lays and Maggi, biscuits, juices, fresh

vegetables, and meat items—clearly representing a wide range of grocery and daily need products.

4) DIFFERENT COLOUR SCHEMES

5) COLLECT USER FEEDBACK

DESIGN 1: 4/5

DESIGN 2: 3/5

DESIGN 3: 2.5/5

FEEDBACK 1: The green background with red buttons is too strong and visually jarring. It reduces readability and may cause eye strain.

FEEDBACK 2: The light pink background is softer on the eyes and improves the visual clarity compared to the previous green.
